SUMMARY

Aspiring DevOps fresher with a strong foundation in Azure Cloud, Terraform, Kubernetes, Docker, Git, and Azure DevOps CI/CD practices. Equipped with a solid understanding of cloud infrastructure, automation, containerization, and version control, I am eager to apply my technical knowledge to real-world projects and learn in a fast-paced environment. Motivated to contribute to efficient operations, continuous improvement, and organizational success while growing as a dependable DevOps engineer.

TECHNICAL EXPERTISE

- Microsoft Azure Cloud Fundamentals and Azure Services
- Terraform – Infrastructure as Code (IaC)
- Kubernetes – Container Orchestration
- Docker – Containerization
- Git & Version Control
- Azure DevOps – CI/CD Pipelines and Automation

EDUCATION

MASTER'S OF TECHNOLOGY IN CAD/CAM

Chaitanya Bharathi Institute of Technology (2022 - 2024)

BACHELOR'S OF TECHNOLOGY In Mechanical Engineering

Malla Reddy Engineering College And Management Sciences (2019 - 2022)

DIPLOMA In Mechanical Engineering

Ellenki College Of Engineering And Technology (2015 - 2018)

SECONDARY SCHOOL

Sri Rao's High School (2015)

PROJECT

Project Name: Board Game Application – CI/CD Automation on Azure DevOps

Description:

Implemented and managed a CI/CD pipeline for a Java-based Board Game application using Azure DevOps. Automated the build, code quality analysis, security scanning, and deployment processes through Azure DevOps Classic Editor pipelines. Configured a self-hosted agent pool to execute pipeline jobs efficiently and integrated industry-standard DevOps tools to ensure code quality and security compliance.

Key Responsibilities & Achievements:

- Designed and implemented CI/CD pipelines in Azure DevOps using Classic Editor for a Java application.
- Configured and managed Self-Hosted Agent Pools for pipeline execution and deployment activities.
- Integrated Apache Maven for automated project build, dependency management, and packaging.
- Configured SonarQube for static code analysis, code quality checks, and technical debt monitoring.
- Integrated Trivy security scanner to perform vulnerability scanning on application artifacts and dependencies.
- Automated build validation, code quality gates, and security checks within the deployment workflow.
- Implemented continuous integration practices to ensure reliable and consistent application builds.
- Monitored pipeline executions, analyzed build failures, and resolved deployment issues.
- Collaborated with development teams to streamline software delivery processes and improve deployment efficiency.
- Maintained version control integration and supported end-to-end deployment automation.
- **TechnologiesUsed:**
Azure DevOps, CI/CD, Java, Maven, SonarQube, Trivy, Self-Hosted Agents, Git, Build & Release Pipelines, DevOps Practices.

WORK EXPERIENCE

Cognizant Technology Solutions (NOV 2024 - DEC 2025)

Worked on the Google project (CMA - Geo Abuse) as a Process Executive in Quality Management.

Production, quality and performance were consistently upheld in every month and transitioned to the quality management team within two months of onboarding.

CERTIFICATION

Azure Cloud with DevOps | Vcube software solutions.
